RESOLUTION #3

Solar Energy

- Whereas: The price and scarcity of heating and cooling materials are increasing at an alarming rate; and
- Whereas: The natural gas supply has been cut off to the University for the past two winters; and
- Whereas: Future research into alternate methods of energy must be implemented.
- Therefore: Be it resolved that this body of Congress request that the University conduct a research project into the feasibility of solar energy as a method of heating and/or cooling the University buildings.

This research project will be conducted by the Western Kentucky University Physics Department in conjunction with other departments they deem necessary.
